Design direction

The goal is to establish a contemporary identity that reflects the brand's values and audience. The approach focuses on an integrated logo that works both as a complete mark and a compressed bold icon. A bright blue tone, paired with italic text and slanted phrases, introduces a sense of movement and energy while maintaining consistency to the overall look.

Concept

Fantacycling is a brand fueled by a positive obsession with cycling. The concept focuses on creating an iconic and recognisable design for the cycling community, capturing its distinctive spirit. The cyclist's cap is a timeless symbol of this sport and perfectly embodies this essence, working as a strong and meaningful sign for cycling enthusiasts.

Logo design

The "F" evolves into a distinctive icon that integrates the profile of the cyclist's cap, adding dynamism and character to the design.

The italic typeface evokes motion and energy, reflecting the playful, and unapologetic nature of Fantacycling.

Belonging, community, and a lighthearted attitude: the logo encapsulates the core values of Fantacycling and its audience.

Logo variations

Colours

Blue continues to lead as the primary color, now refreshed with a brighter tone to align with the brand's digital-first identity.

Yellow is replaced by a spectrum of light blue shades, ensuring a clean and cohesive aesthetic while offering the versatility required for digital and physical applications.

Tone of voice

Fantacycling speaks with confidence, echoing the excitement of fans cheering for their heroes along the roadside. All-caps typography and slanted phrases amplify this energy, reflecting a passionate and dynamic personality.

Open Sans

For longer text, like: A simple, fun, and intuitive app. Build your team for the Championship or challenge your friends in a league!

Graphic system

The negative space within the logo becomes a key visual element, building a flexible and distinctive graphic system. This approach ensures a brand language that remains consistent and versatile across various touchpoints.

New characters

Eventually, how about evolving the characters into a 3D style to create an even more immersive experience? By leveraging AI tools like ComfyUI, the workflow can be simplified to automate the creation process, starting from a rider's photo and transforming it into a fresh visual language.

Here's an example!
